

SunEdison Off Site Energy Solutions

Like most companies, you are under more pressure than ever to meet sustainability goals and to control costs. SunEdison's Off Site Energy Solutions give you one transaction to accomplish both of these goals. We offer a simple, turnkey transaction to meet your energy and environmental needs, producing both clean energy and cost savings across your entire portfolio.

SunEdison will operate and maintain your off site solar energy solution. This flexible, cost effective transaction lets you:

ONSITE VS. OFFSITE ENERGY SOLUTION

Take Charge of Energy Expenses: Protect your bottom line from utilities' unpredictable rate changes when you use stable, predictable solar energy.

Add Solar With Maximum Flexibility: Your SunEdison solar installation is off site, and will not impact your land use or real estate portfolio. It lets you avoid site constraints. You decide when and where to use your solar energy.

Manage Sustainability Goals Efficiently: One project delivers enough energy to power multiple facilities. This lets you drive meaningful emissions reductions right away—and for decades to come. The project will deliver enough energy to power multiple facilities and offsets up to 10,000 metric tons of CO₂ each year.

RECAPTURE UP TO 70% OF SYSTEM COST YEAR 1

Unlock Rapid Return on Investment: Own a system and recapture up to 70 percent of the system cost in the first year of operation, including tax benefits and an up front incentive payment. Or, buy energy from a SunEdison system and save on your energy purchases day one.

Utilize our flexible Financing Options: SunEdison offers a complete set of finance options, allowing you to own, lease, or buy energy from our off site projects. We will design financing terms that meet your needs.

Simplicity: SunEdison manages 100 percent of the project's details today and over the project's life: land management, design, installation, maintenance, and monitoring. Reduce your carbon footprint and realize immediate financial benefits, all in one simple transaction.

Scale: One transaction will meet the power needs of multiple facilities and reduce CO₂ emissions up to 10,000 metric tons each year.

Reliability: SunEdison solar installations are built to last. Our 2 GW portfolio outperforms independent engineering expectations. Teaming with SunEdison is a low risk, long-term investment.

REDUCED ANNUAL CO₂ EMISSIONS

SunEdison is a leading provider of solar energy services. Serving business, public sector including schools and universities, utility, and residential customers, SunEdison is dedicated to transforming lives by delivering economical, clean, renewable energy to communities around the globe.
